```
 1  // Script by BOOTSTRAP to aid form validation:
 2  // Example starter JavaScript for disabling form submissions if there are
 3  // invalid fields
 4
 5  // Fetch all the forms we want to apply custom Bootstrap validation styles to
 6  const forms = document.querySelectorAll(".needs-validation");
 7
 8  // Loop over them and prevent submission
 9  Array.from(forms).forEach(function (form) {
10      form.addEventListener("submit", function (event) {
11          if (!form.checkValidity()) {
12              event.preventDefault();
13              event.stopPropagation();
14          }
15
16          form.classList.add("was-validated");
17      }, false);
18  });
19
20
21  // Custom script to trigger "my thank you modal" after clicking "Send" of
```
